

New Varian DS602 Dual Stage Pump

The pump works with force-feed lubrication, provided by an auxiliary gear-pump driven by the rotor of the vacuum pump itself. This ensures proper lubrication even when pressures are close to atmospheric.

Description

New Varian DS602 Dual Stage Pump Call for Quote

These pumps are Brand New in the factory boxes.

The DS602 pump is a dual-stage, rotary vane pump, oil sealed, pump driven by a single-phase electric motor.

Features:

- All parts in direct contact with the fluid pumped are free of copper alloys.
- All materials are carefully selected to provide extended life.
- A high capacity gas ballast device allow pumping condensable vapors.
- All the parts composing the pump are fully replaceable due to the close machining tolerances and to the centering obtained by using reference pins.
- Due to its design features and low number of gaskets, the pump requires little maintenance. Disassembly and reassemble are easy and require minimal time.

Includes **ONE (1) YEAR WARRANTY**
